IMS Bench SIPp

This section is about a set of changes and additions to SIPp, contributed by Intel and aimed at providing an open source implementation of the IMS/NGN Performance Benchmark, ETSI specification TS 186 008.

- [Introduction](intro.html) (intro.html)
- [Reference documentation](reference.html) (reference.html)

To learn more about what it is and what it can do, please read the [Introduction](intro.html) (intro.html) . To get a really quick feel for it, here are a couple of example benchmark reports for hypothetical systems:

- Example Report with a hypothetical IMS Core as SUT
- Example Report with a hypothetical SIP proxy as SUT

To learn how to use IMS Bench SIPp and how to create scenarios that take advantage of the features it brings, please refer to the [Reference documentation](reference.html) (reference.html) .
